Basic Features

Big Schedules Homepage

1. Click these two icons to switch between sailing schedules and vessel tracking.
2. Enter your origin and destination in the input fields.
3. Click on the color bar to select carriers.
4. Click the Date Range icon to select the date range (up to 8 weeks) of your search.

5. Click the Search icon to start your search.
6. Click the Favorites icon to search your favorite routes.

New Round of Strikes to Hit Greek Ports (World Maritime News, 19 Jan)

Jan 21, 2016 GMT

Schedule Search Results

1. Filter the search results on the left side bar. Big Schedules automatically searches for nearby ports' schedules. Select your preferred routes under "Origin/Destination".
2. Sort the search results by transit time, carrier, CY cutoff time, departure time, and arrival time by clicking the column head.

Port Klang, Selangor, Malaysia / Los Angeles, California, United States
Departing between Mar 29 and Apr 11

Analytics Features

Carrier Performance Analytics

(Available for analytics users)

To learn more about the data scope and methodology of Carrier Performance Analytics, read the [FAQs](#).

1. View the route's carrier performance on the right side of the sailing schedule search results.

2. You can see three charts:

- **Performance Trend**

This chart presents the overall performance trend of on-time and transit time reliability by month for the searched route. By default, it includes the carriers selected in your search. You can select more carriers in the next chart to compare the overall performance.

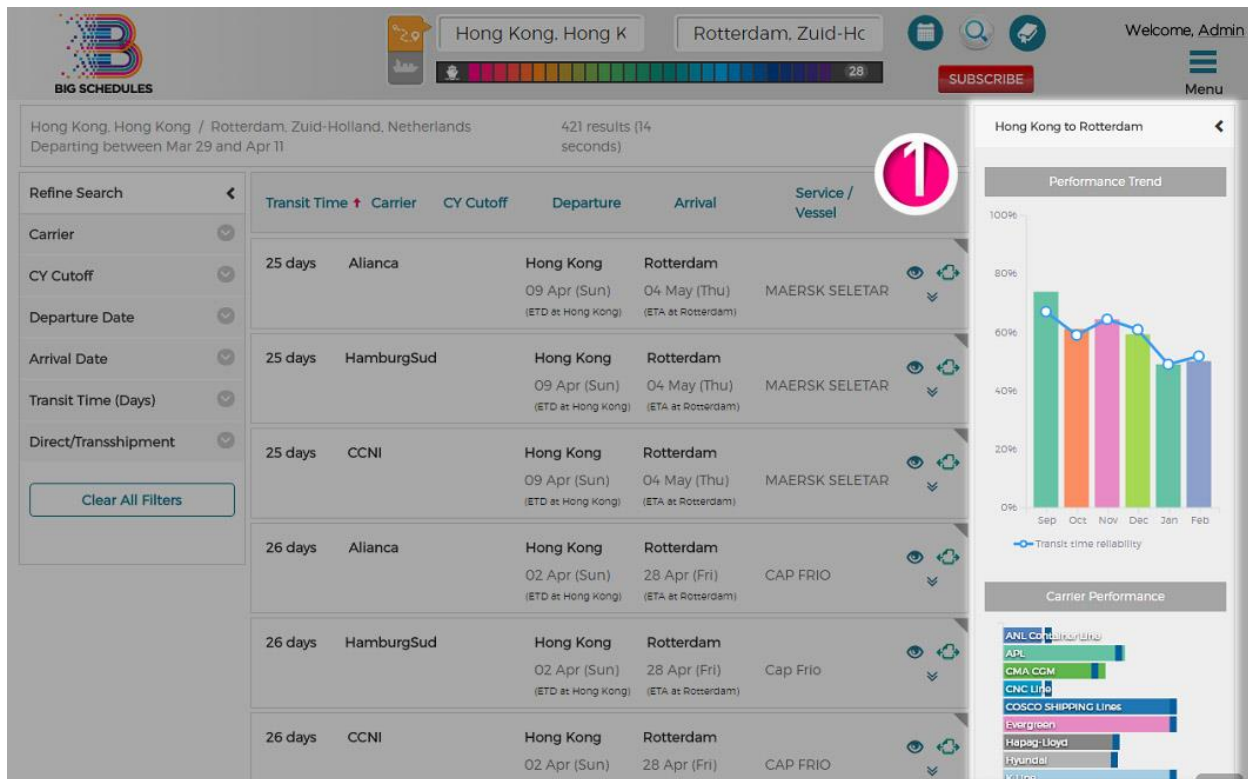

- **Carrier Performance**

This chart presents the on-time and transit time reliability of the individual carriers for the selected route. You can also select the carrier(s) to compare their performance.

- **Average Transit and Waiting Times**

This chart presents the average transit time of the searched port pair and the vessels' average waiting time before berthing at the port of discharge for the selected carriers and period.

3. Click “Carrier Performance” in the top right menu to view the analytics details.

4. By default, the system will add recommended routes based on your search history and pattern.

5. Click the plus icon to add more port pairs and tabs according to your analysis needs.

6. Click the expand icon on the top right corner to maximize the analytics charts of a specific port pair.
7. Check “Overall Trade Performance” under the name of the route to view the reliability of the route’s trade.
8. View the overall route performance at the end of each tab and you can select specific port pairs by clicking the color blocks (each color block represents a port pair) to view the overall performance. The charts below will be refreshed based on the schedules of the selected port pairs.

9. Click on the edit icon of each route to customize the estimated transit time with the time that each carrier has agreed to you to visualize the performance deviation in the charts.

Route Settings

CANCEL DELETE SAVE

10. Select one or more months to view the on-time reliability, transit-time reliability, and average transit and waiting times of the route.
11. Select one or more carriers to review their performance.
12. In the maximized view, you can review on-time reliability by carrier service.

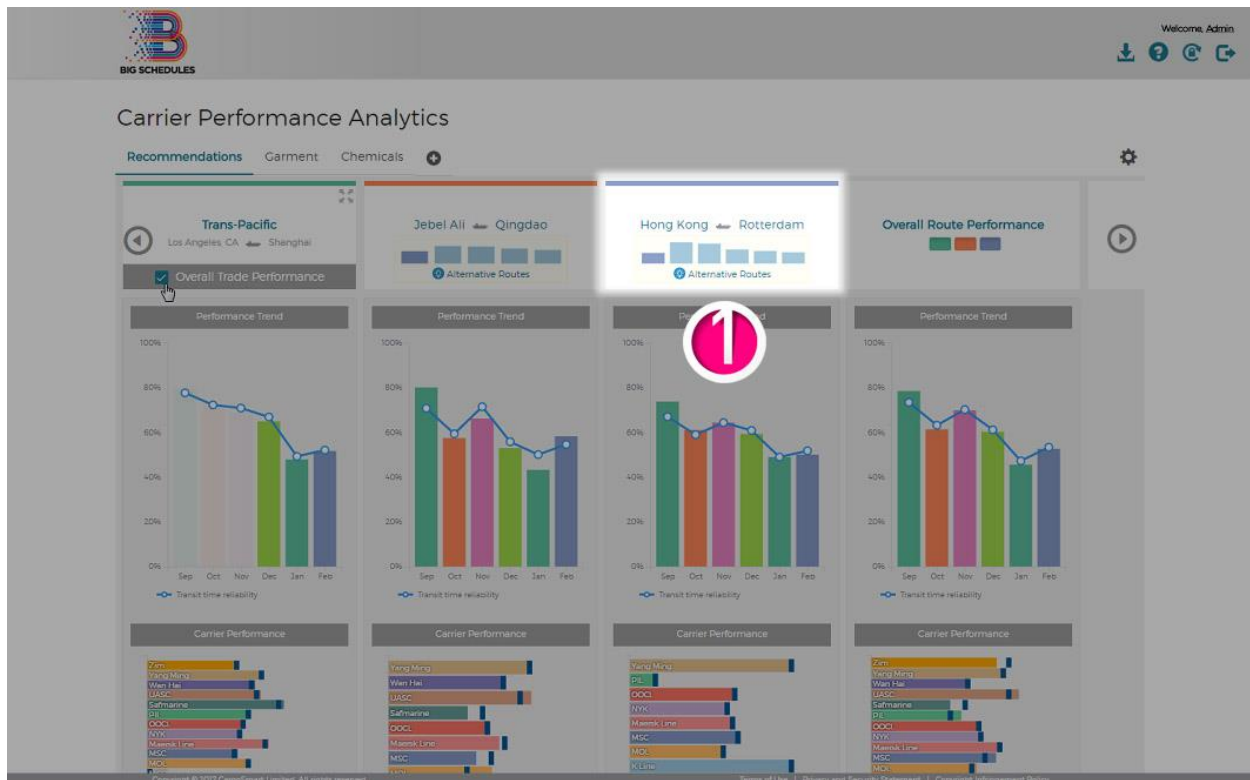

13. To review specific months or ocean carriers in each chart, follow these steps:
- Move your cursor to the blank area of the chart until you see it become a cross.
 - Drag to select the month or carrier blocks that you would like to analyze.
 - Your selected months or carriers will be highlighted and the corresponding charts will refresh automatically.

Route Recommendations

(Available for analytics users)

1. Review system-generated alternative routes with higher reliability to evaluate route options of your selected carriers.

Analytics Data Download

(Available for analytics users)

1. Click the download icon on the right top corner to download the carrier performance data in Excel format for your business needs.

Please contact us at customerservices@iqax.com if you need any assistance.
